

Four leakage axes in the CICIoMT2024 literature, and their correction status

1. Duplicate rows		corrected exactly — this work
2. Device-level overlap		corrected approximately — one study, predicted device labels
3. Official split destroyed by merge-and-re-split		partially mitigated — two 2026 studies, unquantified
4. Resampling before splitting		open — uncorrected corpus-wide

Filled cells encode an ordinal status (none / partial / approximate / exact); they are not a measured quantity.
